ABIMANYU GATYA DHANESWARA

Portfolio Showcase

Who Am I ?

I'm a Senior Software Engineer specializing in building scalable and efficient systems, driven by passion for innovative solutions. Skilled in Golang, TypeScript, PHP, Flutter, Kotlin, and JavaScript, with a solid foundation in software engineering principles. My experiences in software development equips me to take on challenging projects and add value to the team with creativity and innovation, driving technological progress forward.

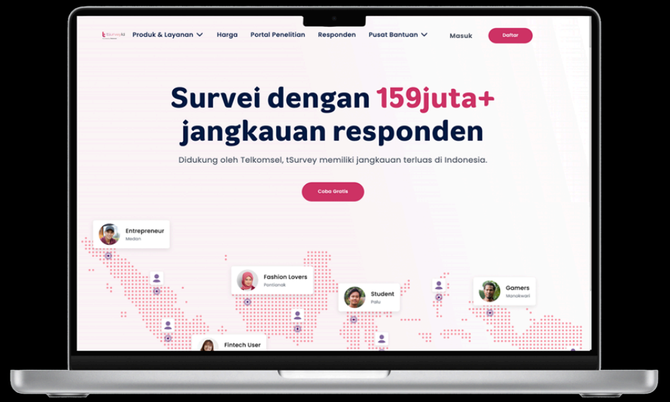

Telkomsel

Telkomsel

Telkomsel — crox.id & tsurvey.id Platforms

I worked on the backend ecosystem powering crox.id, Telkomsel's campaign and customer engagement platform, and tsurvey.id, a large-scale survey and data-collection system. My contributions included designing and optimizing APIs, improving data processing workflows, enhancing system reliability, and integrating microservices with Telkomsel's internal platforms to ensure smooth and secure operations.

Tech Stack
Go, Keystone.Js, PostgreSQL, gRPC, Docker, Redis, RabbitMQ

Grouu

Web Platform, Odoo ERP, Admin Portal, Outlets Portal & Automation

I contributed to the development of Grouu digital ecosystem, starting from its modern, responsive web platform that delivers a seamless user experience and optimized product discovery. Beyond the frontend, I built internal ERP modules, Admin Portal, and Outlets Portal to streamline end to end workflows. I also developed automation that reduced manual operational work by 90% through real-time automation handling 10-100 requests per minute across 190+ outlets and 12 warehouse locations, supporting business operations valued at approximately IDR 3-4B per month.

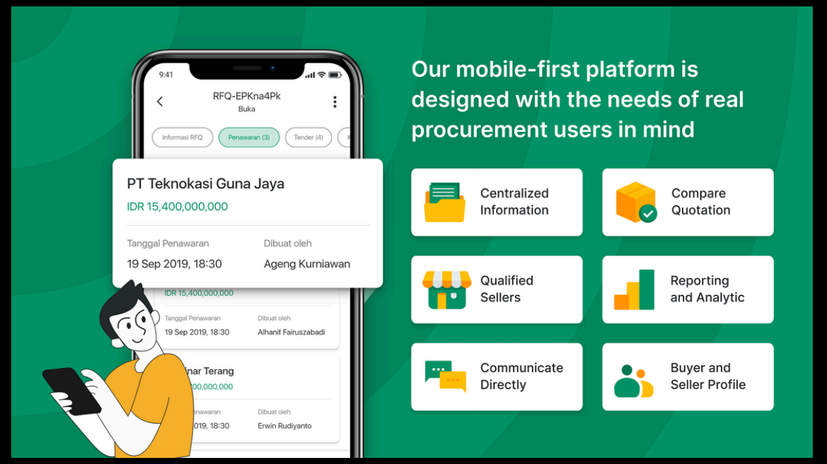

Tech Stack
Go, PHP, Node.Js, Express, Angular, Odoo, MySQL, Docker, Kamal, AWS, Terraform, Grafana K6

Gokomodo

Digital Ecosystem for B2B Commerce and Retail

I contributed to the development of gokomodo.com as part of its end-to-end B2B commerce ecosystem, working on the main web platform, the e-Procurement system for automated RFQ and vendor workflows, the Retail Management System for centralized product and branch operations, the Gokomodo mobile app through API and feature integrations, the SPG Portal to streamline field sales activities and reporting, .

Tech Stack
Go, PostgreSQL, Elasticsearch, TimescaleDB, gRPC, Websocket, Docker, Redis, Kafka, Debezium

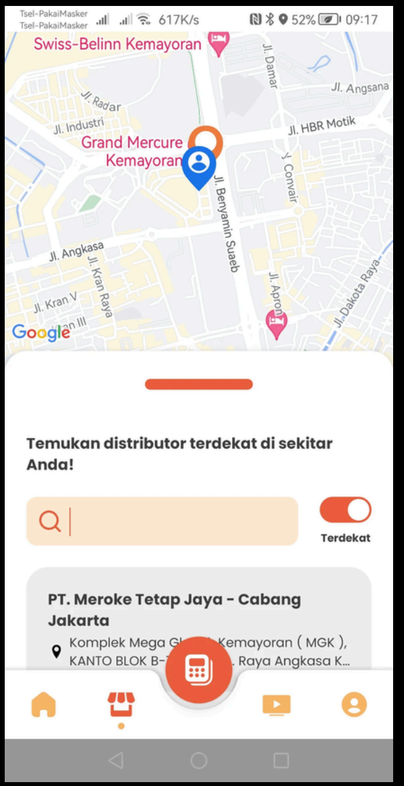

NPK Mutiara

CMS Platforms & Petani Cerdas Apps

I developed and enhanced digital platforms for NPK Mutiara, including the CMS for NPK Mutiara and CMS for Meroke Tetap Jaya, enabling streamlined content management, product updates, and campaign publishing for internal teams. I also contributed to the Petani Cerdas mobile application that help farmers access hara calculator, product information, cultivation guidance, and personalized recommendations.

Tech Stack
Laravel, MySQL, Kotlin, Flutter, Docker, Caddy

Universitas Gajah Mada

Simpro PKMK UGM

II contributed to the development of Simpro PKMK UGM, an internal web-based platform designed to streamline research project management, financial administration, and tax reporting at Universitas Gadjah Mada. I led a three-member team in maintaining and enhancing the system, developing features for contract management, budget tracking, fund requests, and financial reporting. My responsibilities included frontend and backend development, resolving technical issues, optimizing system performance, and collaborating with finance and administrative teams to ensure efficient workflows aligned with institutional procedures.

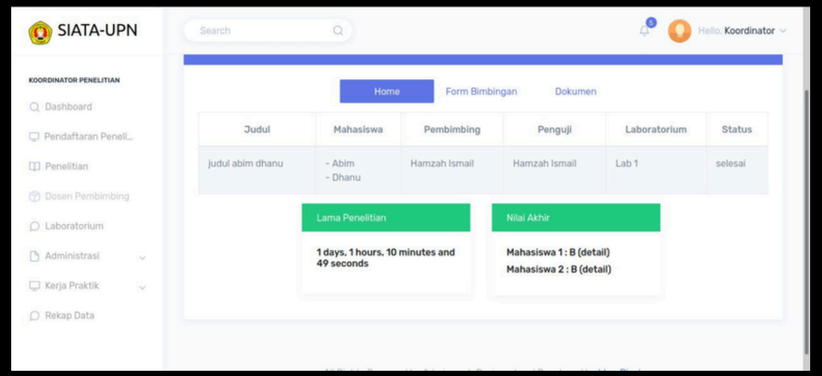

Tech Stack
Laravel, Javascript, MySQL, Docker

UPN Yogyakarta

Academic Information System

I contributed to the development and enhancement of SIATA UPN, a web-based academic information system designed to streamline thesis management at Universitas Pembangunan Nasional Yogyakarta. My responsibilities included developing frontend and backend features, implementing new functionalities, fixing bugs, optimizing database queries, and improving system performance to ensure a seamless experience for students and lecturers.

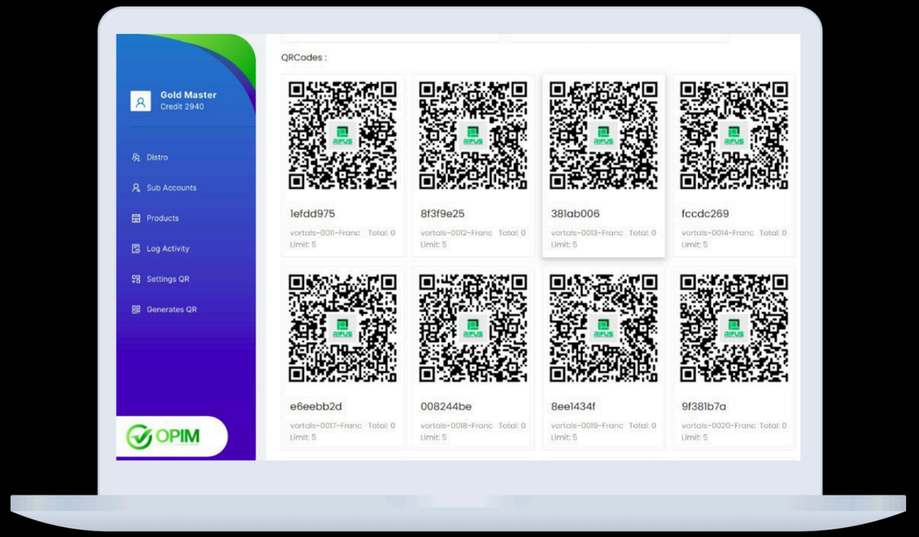

Tech Stack
Laravel, Javascript, MySQL, Docker

OPIM

OPIM
ORI PREMIUM INDONESIAN MARKET

QR Code Tracking System

II contributed to the development and enhancement of OPIM, a web-based product authentication platform designed to verify product authenticity through unique QR codes. I led a four-member team in developing the platform, focusing on responsive user interfaces, backend API integration, and real-time functionality using WebSockets. My responsibilities included coordinating development workflows, implementing frontend features with ReactJS and TypeScript, and supporting the integration of Google Analytics and pixel tracking to monitor user interactions and product verification activities.

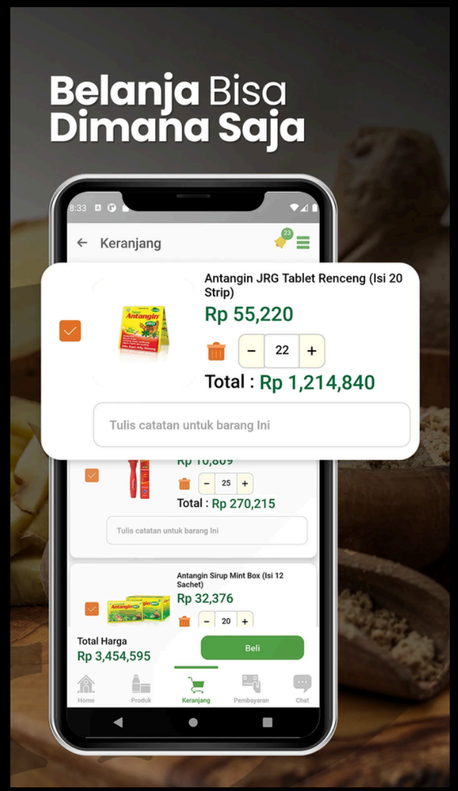

Tech Stack
ReactJS, TypeScript, JavaScript, NestJS, Node.js, PostgreSQL, WebSocket, Docker

Semut Gajah

Mobile App Backend Development

I contributed to the backend development of Semut Gajah, a B2B marketplace connecting principals, distributors, and retail outlets through a seamless digital ordering platform. My work involved developing and maintaining RESTful APIs, managing database operations, implementing business logic for order processing, and integrating real-time features using WebSockets. The platform supports flexible payment terms, free shipping, promotional campaigns, and customer loyalty programs to streamline wholesale transactions.

Tech Stack
Laravel, MySQL, Websocket, Docker, Nginx

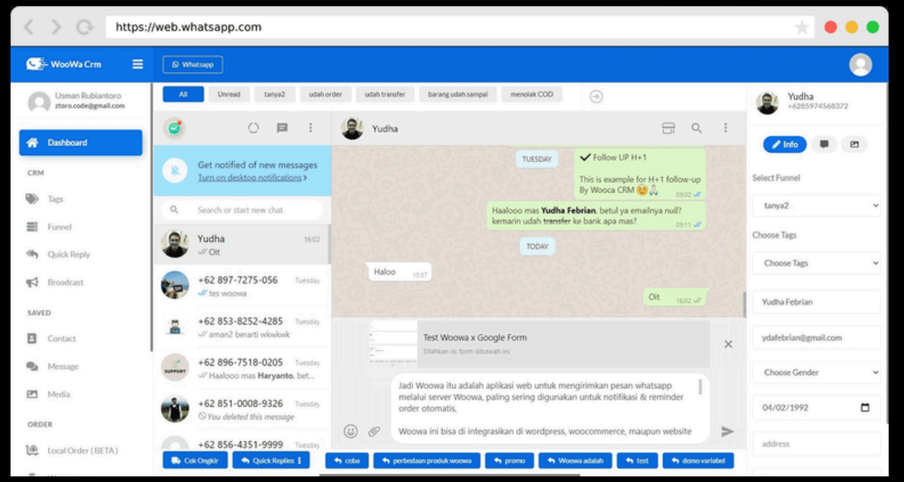

Woowa

Digital Platform Development

I contributed to the development of Woowa, a digital platform focused on enhancing customer engagement and streamlining business workflows through intuitive interfaces and efficient backend processes. My work involved building core features, optimizing API performance, and ensuring smooth integration across various internal and external services.

Tech Stack
PHP, Go, React.Js, MySQL, Docker

Investor Saham Cerdas

Stock Market Education & Investment Platform

I contributed to the development of Investor Saham Cerdas, a web-based platform providing stock market insights, investment education, and financial resources. Collaborating with a small team, I contributed to maintaining and enhancing the platform through frontend and backend development, bug fixes, feature improvements, and performance optimization. I also coordinated project workflows and collaborated with content and marketing teams to improve platform functionality and user experience.

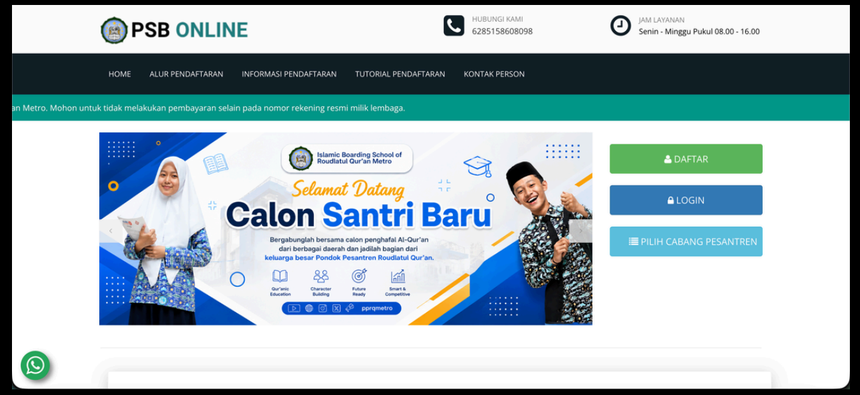

Tech Stack
Laravel, Javascript, MySQL, Docker

PPRQ - Metro Lampung

School Online Registration Platform

I contributed to the development of PSB Online, a web-based school admission platform designed to streamline the student registration and enrollment process. My work involved building responsive user interfaces, developing and integrating backend functionalities, managing student application data, and optimizing system performance to ensure a seamless experience for applicants and school administrators.

Tech Stack
Laravel, MySQL, Docker, Nginx

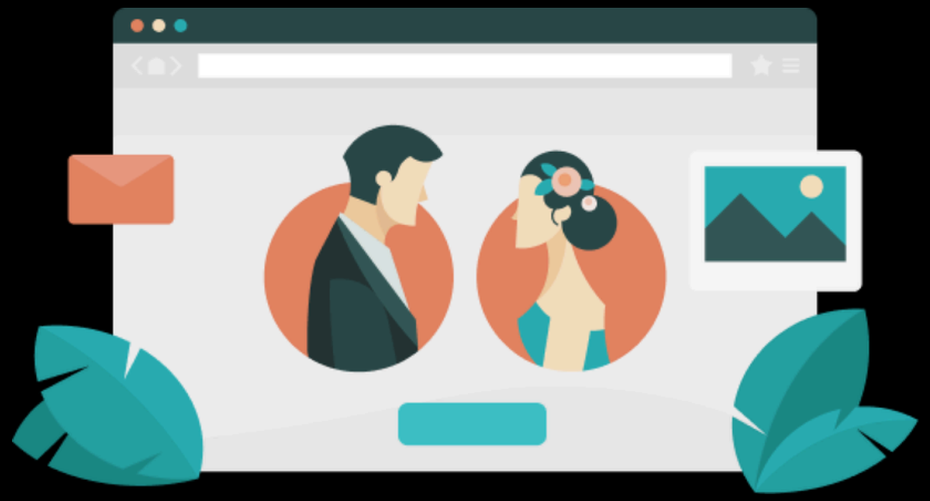

Yes She Said I Do

YesSheSaidIDo

yesshesaidido.com — Wedding Services Web Platform

I developed core components of the Yes She Said I Do platform—an end-to-end solution that enables soon-to-be-weds to launch personalized wedding websites, manage guest lists, generate QR-code invites, and run automated WhatsApp broadcast invitations for their events. The platform includes features such as event details, gallery embedding, digital gifts, RSVP tracking, guest check-in, and downloadable attendance reports.

Tech Stack
Laravel, Vue.Js, MySQL

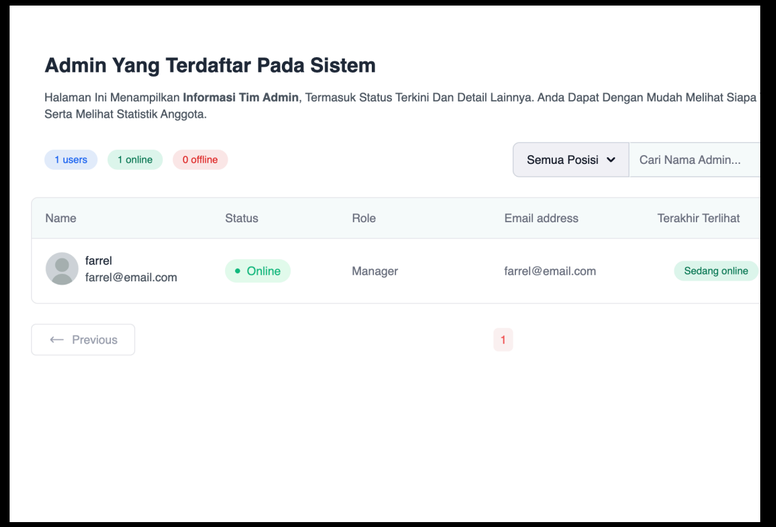

PT Farrel Internusa Pratama

farrel.co.id — Custom CMS Platform

I designed and developed a custom Content Management System (CMS) for farrel.co.id, enabling the client to easily manage website content, product listings, and media assets without technical assistance. The CMS features role-based access control, modular content sections, and an intuitive dashboard optimized for non-technical users.

Tech Stack
Laravel, MySQL, Vue.js, Nginx, Docker.

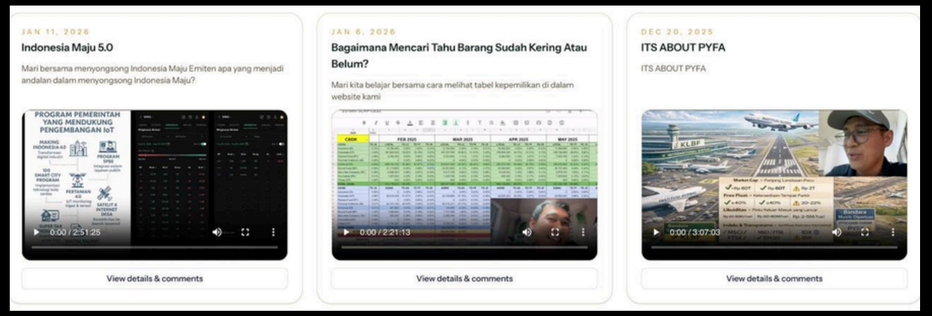

Giat Edu

Giat.edu

Giat Edu - Stock Trading Course Platform

I developed and enhanced stock trading course with growth strategies for Indonesian investors.

Tech Stack
Laravel, MySQL, Nginx, Docker, AWS S3.

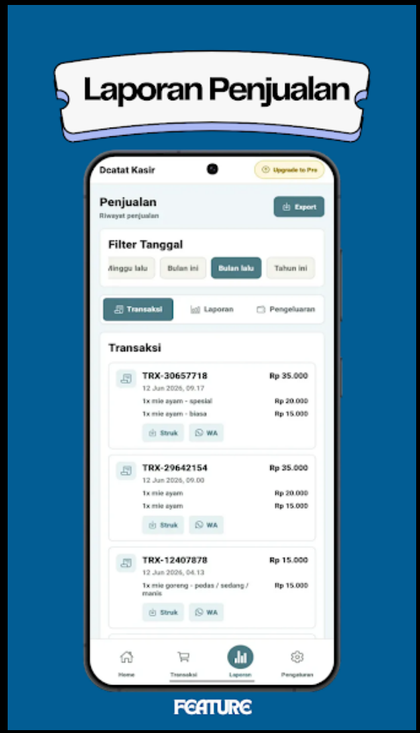

Dcatat Kasir

Dcatat Kasir - Mobile Point-of-Sale App

At Dnbyte, I architected Dcatat Kasir, an point-of-sale product built for UMKM. The project is an early-stage mobile business application that has onboarded pilot merchants.

Tech Stack
React Native and Supabase
